Search Notes

Examiner Portner,

Please review the attached search results.

If you have any questions or if you would like to refine the search query, please feel free to contact me at any time.

Thank you for using STIC search services!

Paul Schulwitz Technical Information Specialist REM-1A65 571-272-2527

Schulwitz, Paul

Subject:

09/904994 nucleic and amino acid sequence search with specific gap values; claims attached

Importance: High

Thanks for your help with this search issue. I am sending the claims to you now (Snagit training WORKed!!!!!!!!) Once I check the Spec for a program name etc I will send you another email. ginny

FW: 09/904994 nucleic and amino acid sequence search with specific gap values; claims

attached

Importance: High

Paul, From the Specification, I found that they sued a computer program called "Align Plus for Windows, available from Scientific and Educational Software, P.O. Box 72045, Durham, NC 27722-2045 USA. I hope that this information helps. ginny

attached

Importance: High

Paul, After looking at all of the claims, I found that they claims SEQ ID Nos 1, 2 and 3. with the nucleic acid perameters of claim 23 previously emailed, and the polypeptide sequences with a different set of perameters as set forth in emailed claim 34. Thanks!!!

In the claims:

Claims 1 - 22 (Canceled)

23. (Currently amended) A ducloic acid molecule comprising a nucleotide sequence encoding two <u>urease X and urease Y</u> subunit polypeptides of a urease complex such as expressed by Helicobacter felis, said nucleotide sequence having at least 85% homology with SEQ ID NO: 1 or a part thereof encoding at least an immunogenic fragment of one of said subunits, said part having a length of at least 40 ZD nucleotides.

34. (Currently amended) An isolated Halicohacter felis urease X subunit polypeptide, said polypeptide comprising an umino acid sequence that is at least 85% homologous to SEQ ID NO: 2, or an immunogenic fragment of said polypeptide having a length of at least 40 70 amino acids, wherein said immunogenic fragment induces an immune response against an urease X subunit in urease XY.

Attorney Docket: I-2000.566 US

Response to Office Action of November 21, 2005

Amendments to the Claims:

min longth = 70

1. - 22. (cancelled)

- 23. (currently amended) [[A]] An isolated nucleic acid molecule comprising
- (i) a nucleotide sequence encoding urease X and urease Y subunit polypeptides of a urease complex expressed by *Helicobacter felis*, said nucleotide sequence having at least 85% homology with SEQ ID NO: 1 as determined over a global alignment wherein the mismatch value is 1, the open gap value is 3 and the extended gap value is 3; or

 (ii) a part thereof of (i) encoding at least an immunogenic fragment of one of said subunits, sai
- (ii) a part thereof of (i) encoding at least an immunogenic fragment of one of said subunits, said part having a length of at least 70 nucleotides.

24. - 25. (cancelled)

- 26. (original) The nucleic acid molecule of claim 23, which encodes one or both of the urease X subunit polypeptide and urease Y subunit polypeptide.
- 27. (cancelled)
- 28. (currently amended) The nucleic acid molecule of claim 23, wherein the nucleotide sequence has at least 94% homology with SEQ ID No: 1 as determined over a global alignment wherein the mismatch value is 1, the open gap value is 3 and the extended gap value is 3.
- 29. (cancelled)
- 30. (previously presented) An isolated and purified DNA fragment comprising a nucleotide sequence according to claim 23.

Attorney Docket: 1-2000.566 US

Response to Office Action of November 21, 2005

- 31. (original) A recombinant DNA molecule comprising a nucleotide sequence according to Claim 23 under the control of a functionally linked promoter.
- 32. (original) A live recombinant carrier comprising a recombinant DNA molecule of claim 31.
- 33. (original) A host cell comprising a nucleic acid molecule of claim 23, a DNA fragment of claim 30, a recombinant DNA molecule of claim 31 or a live recombinant carrier of claim 32.
- 34. (currently amended) An isolated *Helicobacter felis* urease X subunit polypeptide, said polypeptide comprising
- (a) an amino acid sequence that is at least 85% homologous to SEQ ID NO: 2 as determined over a global alignment wherein the mismatch value is 2, the open gap value is 4 and the extended gap value is 1; [[,]] or
- (b) an immunogenic fragment of (a) said polypeptide having a length of at least 70 amino acids, wherein said immunogenic fragment induces an immune response against [[an]] a urease X subunit in ureaseXY.
- 35. -36. (cancelled)
- 37. (currently amended) The polypeptide of claim 34, wherein said polypeptide comprises:
- (i) an amino acid sequence that is at least 90% homologous to SEQ ID NO: 2 as determined over a global alignment wherein the mismatch value is 2, the open gap value is 4 and the extended gap value is 1; [[,]] or
- (ii) an immunogenic fragment of said-polypeptide which (i) having a length of at least 70 amino acids;

wherein said immunogenic fragment induces an immune response against [[an]] a urease X subunit in ureaseXY.

Attorney Docket: I-2000.566 US

Response to Office Action of November 21, 2005

- 38. (currently amended) The polypeptide of claim [[37]] 34, wherein said polypeptide comprises:
- (i) an amino acid sequence that is at least 94% homologous to SEQ ID NO: 2 as determined over a global alignment wherein the mismatch value is 2, the open gap value is 4 and the extended gap value is 1; [[,]] or
- (ii) an immunogenic fragment of said polypeptide which (i) having a length of at least 70 amino acids;

wherein said immunogenic fragment induces an immune response against [[an]] a urease X subunit in ureaseXY.

- 39. (currently amended) The polypeptide of claim [[31]] 34, wherein said polypeptide comprises:
- (i) an amino acid sequence that is at least [[97%]] 99% homologous to SEQ ID NO: 2 as determined over a global alignment wherein the mismatch value is 2, the open gap value is 4 and the extended gap value is 1; [[,]] or
- (ii) an immunogenic fragment of said-polypeptide which (i) having a length of at least 70 amino acids;

wherein said immunogenic fragment induces an immune response against [[an]] a urease X subunit in ureaseXY.

- 40. (currently amended) An isolated *Helicobacter felis* urease Y subunit polypeptide, said polypeptide comprising
- (a) an amino acid sequence that is at least [[85%]] 86% homologous to SEQ ID NO: 3 as determined over a global alignment wherein the mismatch value is 2, the open gap value is 4 and the extended gap value is 1; [[,]] or
- (b) an immunogenic fragment of (a) said polypeptide having a length of at least 70 amino acids, wherein said immunogenic fragment induces an immune response against [[an]] a ureaseY subunit in ureaseXY.

Attorney Docket: 1-2000.566 US

Response to Office Action of November 21, 2005

41.- 43. (cancelled)

44. (currently amended) The polypeptide of claim 40, wherein said polypeptide comprises:

(i) an amino acid sequence that is at least [[94%]] 98% homologous to SEQ ID NO: 3 as determined over a global alignment wherein the mismatch value is 2, the open gap value is 4 and the extended gap value is 1; [[,]] or

(ii) an immunogenic fragment of said polypeptide, which (i) having a length of at least 70 amino acids;

wherein said immunogenic fragment induces an immune response against [[an]] a urease Y subunit in ureaseXY.

45. (cancelled)

46. (previously presented) An immunogenic composition comprising an immunogenically effective amount of a nucleic acid molecule of claim 23 and a pharmaceutically acceptable carrier.

47. (previously presented) The immunogenic composition of claim 46, further comprising an adjuvant.

- 48. (previously presented) The immunogenic composition of claim 46, further comprising an additional antigen derived from a virus or microorganism which is pathogenic to mammals.
- 49. (previously presented) The immunogenic composition of claim 48, wherein said virus or microorganism pathogenic to mammals is selected from the group consisting of Feline Infectious Peritonitis virus, Feline Immune deficiency virus, Canine Parvovirus, Feline Parvovirus, Distemper virus, Adenovirus, Calicivirus, Bordetella bronchiseptica, Borrelia burgdorferi,

Attorney Docket: I-2000.566 US

Response to Office Action of November 21, 2005

Leptospira interrogans, Chlamydia and Bartonella henseli.

50. (previously presented) An immunogenic composition for combating *Helicobater felis* infections, comprising antibodies against a polypeptide of claims 34 or 40.

51.- 56. (cancelled)

- 57. (previously presented) An immunogenic composition, comprising an immunogenically effective amount of a polypeptide according to Claim 34 and a pharmaceutically acceptable carrier.
- 58. (previously presented) An immunogenic composition, comprising an immunogenically effective amount of a polypeptide according to claim 40 and pharmaceutically acceptable carrier.
- 59. (new) The polypeptide of claim 40, wherein said polypeptide comprises:
- (i) an amino acid sequence that is at least 99% homologous to SEQ ID NO: 3 as determined over a global alignment wherein the mismatch value is 2, the open gap value is 4 and the extended gap value is 1; or
- (ii) an immunogenic fragment of (i) having a length of at least 70 amino acids; wherein said immunogenic fragment induces an immune response against a urease Y subunit in ureaseXY.

Molecular analysis of urease genes from a newly identified
uncultured species of Helicobacter
Infect. Immun. 62 (5), 1631-1638 (1994)
8168924
On May 3, 1995 this sequence version replaced gi:529422.

```

```
The present invention relates to a novel Helicobacter felia urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis in Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an urease subunit polypeptide complex encoding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  278
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         338
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300
